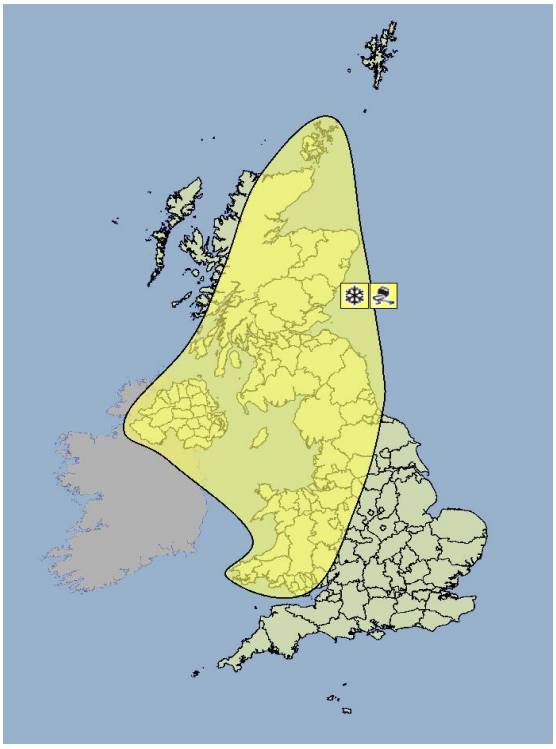
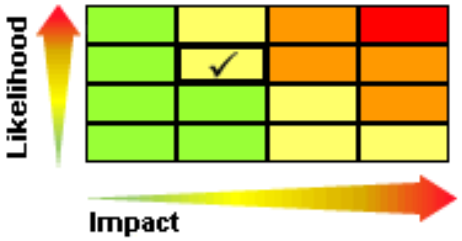
National Severe Weather Warning Service





Chief Forecasters Assessment
Snow is likely to be confined to hills above 100 metres over Northern Ireland, but to low levels elsewhere. Away from coasts, 1-3 cm of snow is possible with up to 5 cm above 200 metres. As skies clear from the west early on Tuesday morning, ice is likely to develop across western Scotland and Northern Ireland.

This warning has been updated to extend the southern boundary further south across parts of Wales for snow, and further north over Orkney to cater for the ice risk following clearance of rain or sleet here on Monday morning. The start time has also been brought forward to 8pm.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **20:00 on Mon, 05th Feb 2018** until **15:00 on Tue, 06th Feb 2018**

A spell of rain, quickly turning to sleet and snow, will move southeast across the UK on Monday night and Tuesday, gradually weakening across England and Wales.

Some roads and railways may be affected with longer journey times by road, bus and train services. As rain, sleet and snow clears Northern Ireland and Scotland overnight Monday, ice may form on some untreated roads, pavements and cycle paths.
